

Smarter way to **Invest**

BUSINESS PRESENTATION

<https://primestellar.net>

About Company

Creating long-term value for our investors through the careful stewardship of their capital.

primestellar.net is a private, legally registered online investment company with the goal of earning the greatest profit possible from Foreign exchange trading. If this sounds like your ideal situation, and if you are considering entering the online investment marketing, we strongly recommend giving us here at primestellar.net a try; we are positive that you will be able to become a huge success in partnership with our company.

Our Company Objectives

We will move forward by making the customer our primary focus across all our businesses and activities. Our portfolio of businesses includes ones that are established (Celebrate, Invest and Cash Solutions), some that we are embedding (Collect and Discover), and new ones that are emerging (Security and Enterprise). Our progress will be made possible by investing in our brand, rethinking our customer ecosystem, working in a more agile way, and consistently delivering excellent products and services.

Meet The CEO

Dr. Tariq Abdulqader is a seasoned entrepreneur and visionary leader in the world of online investment. With a deep expertise in Foreign Exchange trading, Dr. Abdulqader founded Prime Stellar with a singular goal in mind: to empower individuals and organizations to achieve financial success through innovative, transparent, and strategic investment solutions. Under his leadership, Prime Stella has grown into a trusted name in the industry, offering unparalleled opportunities for growth in the online investment market. A passionate advocate for financial literacy and wealth-building, Dr. Abdulqader's focus remains on ensuring long-term success for both clients and partners.

Team Leaders of Company

We are making investment accessible to everyone.

Our Priorities

✓ **Fast, Flexible Financing**

We understand that timing is everything in business. That's why we offer quick, streamlined approvals and tailored finance solutions—so you can access the equipment and vehicles you need, exactly when you need them. No red tape, just results.

✓ **Personalised Service**

At Prime Stellar, you're more than just a number. Our dedicated team takes the time to understand your business goals and provides one-to-one guidance throughout the entire finance process. We're here to help you succeed, not just sign a deal.

✓ **Trusted by Businesses Nationwide**

From small businesses to large enterprises, companies trust us to deliver smart, cost-effective asset finance solutions. With decades of industry experience and strong lender relationships, we're proud to be the partner businesses rely on.

Our Priorities

Prime Stellar Key Features

Purchases

You can invest in gold regularly over time by scheduling purchases on a daily, weekly or monthly basis.

High Security

With the highest level of system security, your gold-asset investments and all your data are safe.

Cryptanalysis

Cryptanalysis of Prime Stellar system software produces 98.6% of profitable transactions, so each user of our site can be sure of the profit.

Easy Interface

You don't need to look for what or where. You can easily manage your accounts with our user-friendly panel.

Support

You don't need to look for what or where. You can easily manage your accounts with our user-friendly panel.

Licensed Organization

We are among the important investment institutions with our world-class technological infrastructure.

Investment Management

We serve high-net-worth individuals, and foundations, providing investment management services and offer investment products to achieve investment goals and financial well-being.

Investing and Lending

We provides a variety of services to bring investors together with projects and organizations in need of capital.

Transaction and Investment Banking

At primestellar.net, we have been continuously transforming the traditional money management industry, in order to open the financial markets to everyone, everywhere.

Portfolio Management

We precisely provide value in those areas that matter. We assist portfolio companies in developing and executing strategic growth, building the board and executive management team, exploring capitalization structures, pursuing growth mergers and acquisitions, and enhancing market presence.

Aligning with leading Crypto best practice

With Bitcoin, miners attempt to find Bitcoin through solving complex mathematical problems. Blockchain is the technology that the cryptocurrency is built on. It is a ledger that is publicly distributed and records every Bitcoin transaction. It is literally a digital chain of blocks. Each block contains a group of Bitcoin transaction information. Miners add to the blockchain by using computer processing power to solve complex mathematical problems. Solving the problems will result in the block being successfully added to the chain. The miner who correctly solves the problem is awarded Bitcoin. The above forms the basis of the complex process of Bitcoin mining. It helps keep the payment network secure and trustworthy. The network is built on a peer-to-peer network, meaning that every single miner across the globe is contributing their computing power to maintain the network, confirm its transactions, and keep them secure.

How to start Oil Trading business in UAE?

<https://primestellar.net>

Aligning with leading Oil Market best practice

Crude oil trading offers excellent opportunities to profit in nearly all market conditions due to its unique standing within the world's economic and political systems. Also, energy sector volatility has risen sharply in recent years, ensuring strong trends that can produce consistent returns for short-term swing trades and long-term timing strategies. Crude oil moves through perceptions of supply and demand, affected by worldwide output as well as global economic prosperity. Oversupply and shrinking demand encourage traders to sell crude oil markets, while rising demand and declining or flat production encourages traders to bid crude oil higher. Professional traders and hedgers dominate the energy futures markets, with industry players taking positions to offset physical exposure while hedge funds speculate on long- and short-term direction. Retail traders and investors exert less influence here than in more emotional markets, like precious metals or high beta growth stocks. Retail's influence rises when crude oil trends sharply, attracting capital from small players who are drawn into these markets by front-page headlines and table-pounding talking heads. The subsequent waves of greed and fear can intensify underlying trend momentum, contributing to historic climaxes and collapses that print exceptionally high volume.

Agricultural trades and investment

Trade plays a crucial role in delivering food and clothing to consumers worldwide. It helps to provide greater choice in consumer goods, and has played a role in reducing food insecurity across the globe. Over the past decade, international agricultural and food markets have witnessed a number of changes, which have brought domestic and international markets closer together. Since 2000, trade in agro-food products has grown strongly – more strongly than in the preceding decade at close to 8% in real terms annually between 2001 and 2014 compared to 2% between 1990 and 2000 – as world markets responded to a more rules-based trading environment, falling tariffs, and reductions in trade-distorting producer support. Global agricultural production has also continued to increase, driven by rapid growth in a number of developing regions, in particular those of Asia and South America. But agro-food trade isn't just increasing, it's becoming 'global'. The food and clothing that consumers find in their local stores are increasingly made from a wider range of products, produced in a wider range of locations across the globe. Among the changes seen in agro-food markets, there has been a significant increase in trade among emerging and developing countries, which are increasing in importance, both as suppliers and markets for agro-food products. Increasing trade has also been accompanied by deeper integration of the world's food system. A growing share of agro-food trade is taking place in global value chains (GVCs) – agricultural and food processing value chains that are spread over several countries – linking agro-food sectors and other sectors of the economy from across the world.

Agricultural trades and investment

Trade and domestic support measures continue to constrain trade and further integration of agro-food markets. While international agro-food markets have evolved, most countries continue to provide support and impose barriers through measures that distort trade and limit the benefits that international agro-food markets can deliver for consumers. These measures continue to have significant and negative effects on the welfare, resilience and food security of consumers and producers, as well as on agricultural sustainability, and also reduce agricultural and food trade volumes. And while an objective of many trade and domestic support policies is to increase food production, there is little evidence that they achieve this goal: global agricultural and food production would be higher if distorting support was removed. New and closer linkages between agricultural and food sectors, and between these and other sectors of the economy, mean that the impacts of trade and domestic support measures are transmitted more widely. Globally, around 24% of agro-food export value comes from imported inputs: industrial inputs (machinery and fertiliser) and services, as well as agriculture and food. Trade policies that act as barriers to imports directly reduce the competitiveness of a country's own agro-food exports by raising input costs. Other measures that affect the flow of agro-food products across borders can also reduce trade. Non-tariff measures (NTMs) – those related to laws, regulations and requirements such as sanitary and phyto-sanitary measures (SPS), technical barriers to trade (TBT) and customs procedures – are in place to achieve legitimate regulatory goals, they can restrict trade depending on how they are designed and enforced.

Agricultural trades and investment

The greatest benefits from reform come when everyone acts together. With regions and sectors becoming more globally connected, countries at all stages of development have a greater common interest in ensuring that international agro-food markets are free from distortions. The gains from reform are greatest when all countries – developed and developing – act together to reduce trade-related and domestic support. Developed countries benefit from lower prices for their consumers and production shifts towards more efficient sectors. For some countries, the gains largely come from reforming their own distorting policies. The welfare gains to developing countries are significantly larger when all countries reduce trade-related and domestic support. This is because the benefits from reform for developing countries are critically linked to the actions of other developing countries – reflecting the increase in ‘south-south’ trade. As the distorting effects of tariffs and domestic support are reduced, the potentially trade-reducing effects of NTMs will become more apparent. The trade impacts of such measures can be reduced by removing unnecessary costs that may arise from poor design or implementation. In sum, policies matter for the gains from agro-food trade. At the OECD, we analyse the impacts of trade and agricultural policies to assist countries in making informed policy decisions that will help make agro-food trade work for all. Countries’ policies that restrict trade or unnecessarily increase trade costs harm their own domestic economies as well as their trading partners, by constraining the development of the agro-food sector.

Agricultural trades and investment

To enhance the gains from trade for agro-food sectors, countries should reduce their own distorting domestic support and their trade measures, such as tariffs. By increasing the cost of inputs, these policies reduce export competitiveness and can constrain a country's ability to participate in agro-food GVCs. Well-designed regulations can help build trust and support trade, so countries should also ensure that NTMs, including SPS and TBT measures, are appropriate, transparent, and well-founded in science – all ways to ensure that they do not unnecessarily restrict trade. Finally, government policies have an important role in providing an enabling environment that can promote agricultural productivity growth and enhance the competitiveness of agro-food exports and participation in GVCs through appropriate investments in key areas such as transport infrastructure, education and research & development.
